

Accounts Payable has a New Hero.

In an age when companies are tightening financial controls and automating business processes, Accounts Payable remains a largely manual process.

Paper invoices still arrive, must be keyed into SAP, are then filed in cabinets and ultimately warehoused in boxes. The invoice

is not easily tracked, the approval process is prolonged, and timely, accurate information is not available on demand. Couple this manual process with vendor queries and error resolution tasks...and a simple vendor inquiry becomes painful. The journey from mailroom to paid invoice is time-consuming, repetitive, and error prone. And, oh yes, it is expensive.

- > **No mail to open, sort or distribute**
- > **No data entry**
- > **No scanning**
- > **No indexing**
- > **No errors**

Fast, Effective e-Invoicing

Finally, e-Invoicing that is so efficient, you'll save \$5 or more on each invoice.

Faster processing, lower transaction costs and greater visibility translates to significant savings and optimization throughout the Accounts Payable process.

We've made e-Invoicing fast, easy and affordable to implement for SAP Accounts Payable - even for your smallest vendors. It eliminates all paper and manual handling, from validating and scanning to indexing and distributing. Unlike traditional EDI, Dolphin's e-Invoicing requires no costly IT maintenance or change in your vendors' billing systems. It's so easy that your vendors will thank you.
